

## UltraLipo System

The equipment utilizes the ultrasonic head to release 40,000 Hz powerful ultrasonic vibrations to break up fatty cells. Cellulite is broken from harmful triglyceride to single glycerol molecules and single fatty acids. After the cellulite has been broken down into simpler components, the RF head utilizes heat to melt these cells and lead them through the lymphatic system to be disposed of. Lastly, the use the dynamical red photo light with oriented electrodes tightens the skin to allow for the overall body slimming and beauty effects.

### 1. Ultrasonic Cracking Head.

It uses the strong ultrasonic head to shoot 40,000 Hz ultrasonic energy into the body. After entering the body, the vibrations break up tough fatty cells resulting in the effective exhaustion of heat energy and the exhaustion of water from those cells. This process allows for the shrinkage of fatty cells.

### 2. Radio Frequency Dissolving Head.

It takes the most advanced RF technique and energy to directly penetrate the dermis to melt broken fatty cells and cause shrinkage in the area. Redundant fatty cells and toxins are exhausted from the body through sweat glands and drained through the lymphatic system effectively eliminating cellulite.

### 3. Oriented Electrodes with Photo Light.

Through the electrode energy of the equipment, the production of energy waves stimulates the body and allows for extra firming and sculpturing of the treatment area. The Photo Light component also improves pigments of the skin.

**Attention!** Clients with pace-makers or other metallic implant objects in the head or body are not suitable for the UltraLipo treatment as electric currents from the system will cause undesirable effects. Also, those who are pregnant and/or nursing should not undergo the treatment.

## Lumicell Touch

Working hand in hand with infrared or magenta light properties, the Lumicell Touch heads achieve their full deep tissue massage potential by stimulating the skin into regaining its proper form, holding off the dimple effect of cellulite.

Reduces specific cellulite-related problems such as:

- Water retention
- Tones and reduces dimpling
- Stimulates blood and lymphatic circulation
- Softens fibrous tissues
- Reduces endemic exchanges and relieves congestions
- Allows targeted treatment of all body areas subject to cellulite (legs, thighs, buttocks, abdomen, arms, back)

Infrared light penetrates the dermis and hypodermis and reaches the muscle tissue. As tissue is warmed, it releases stored fat; the fat is then melted and filtered through the body and released naturally

- Stimulates blood and lymphatic circulation
- Improves toxin elimination
- Softens fibrous adhesions
- Diminishes congestion

Magenta light enters the epidermis and reaches the dermis to increase collagen production five-fold. It also increases dermal elasticity, triggers the body's own regenerative processes, encourages better cellular nutrition, and promotes intercellular communication. Magenta light eliminates toxins and improves the delivery of nutritional elements while stimulating blood circulation and decongestion.

## Annie Lai Beauty Studio

### Service Information

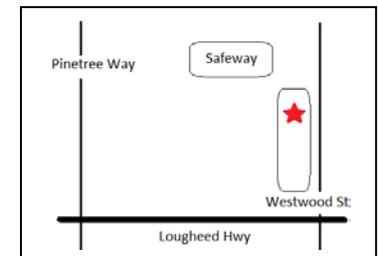

*~ Nourish the soul by immersing yourself in the world of beauty and relaxation ~*

[www.AnnieLaiBeauty.com](http://www.AnnieLaiBeauty.com)

242-3025 Lougheed Hwy.  
Sunwood Square  
Coquitlam, BC  
V3B 6S2

Tel: 604. 552. 9292  
Tel/Fax: 604. 552. 7798

Business Hours:  
Mon/Tues 9.30am – 5.30pm  
Wed/Thurs/Fri 9.30am – 6pm  
Saturday 9.30am – 5pm  
Sunday 11am – 4pm  
Closed on statutory holidays

## Intense Diamond Peeling

---

Diamond Peeling is a pain-free non-surgical exfoliation of the skin using natural diamond chips while at the same time vacuuming the dead skin cells away. It removes the topmost layer of the skin without the adverse effects of loose particles, irritation or skin reaction. Because the outer layer of dead skin cell is removed, it promotes the growth of healthy new skin cells and leaves a smoother skin texture. Age spots, fine lines and freckles will be diminished while stretch marks and acne scars will be less evident. Lots of clients report their skin appears more even, smoother, suppler and younger.

## Intense Pulsed Light (IPL)

---

IPL emits high intensity pulses of light (not lasers) to rejuvenate skin by stimulating the growth of new collagen and elastin fibres. It is a non-invasive treatment that targets deep layers of the skin without affecting the epidermis.

Applications include:

- Wrinkle, fine line & pore reduction
- Acne marks, age spot, pigmentation reduction
- Permanent hair removal\*

\*The number of sessions required for full results vary with each individual as hair composition, characteristics, and growth patterns differ.

## Soli-Tone Infinite Energy

---

Multi-technology producing true cellular rejuvenation works from inside out. This treatment is a complete photo-rejuvenation procedure that combines the effect of Light energy, Micronized currents and HF Polarized currents to produce skin rejuvenation that is safe, comfortable and effective. Soli-Tone can be used for acne, pigmentation, acne scarring, redness, roseasia, inflammation, enlarged pores, thickening of skin, photoaging, sun damage, fine lines, wrinkles.

### LumiLift®

During the treatment, two lifting electrodes use high frequency density to stimulate the photoreceptors that absorb the light in the skin to induce cell response. The pulsed red light produces an energy wave that stimulates the repairing functions and mechanisms of the fibroblast cells. The diodes of Soli-Tone have a pure non invasive effect because they do not contain harmful UV rays.

### LuimiFacial®

When the colours are applied with appropriate power density and duration, they have a unique and direct effect on the cells responsible for the different problems in the skin.

**Blue Light:** It improves the skin with tendency to acne thanks to its purifying and anti bacterial properties.

**Green Light:** It attenuates the pigmentation penetrating the basal layers of the epidermis.

**Yellow Light:** It is used to treat red stains but also has relaxing properties, of drainage and detoxification; the organic liquids absorb it and act in the lymph and blood circulation.

**Red Light:** It quintuples the production of collagen in the skin originating functions that repair and stimulate the fibroblasts and the growth of cells.

## Monopolar Radio Frequency (RF)

---

Under effect of polarized molecule resonance, RF heats collagen tissue of dermis layer. When deep collagen tissue is heated up to 45-60 degrees, it will naturally produce instant shrinking, stimulate to excrete much new collagen to make up interspace of the shrinking or lost collagen protein, rebuild skin soft bracket, and finally tighten skin, remove wrinkle, recover skin elasticity and lustre.

RF delivers heat to the superficial and deep layers of skin to cause tightening of the skin and the production of new collagen. New collagen is firm and tight. Old collagen will cause the skin to appear saggy and loose. RF works by re-building the collagen in the skin. The RF procedure is effective in restoring skin fullness because RF treatments, unlike any other treatments, affect both the superficial and deep layers of the skin. Because RF is a non-invasive procedure, it does not carry risks associated with surgery or other semi-invasive cosmetic treatments.

It is commonly used to treat the forehead (lift brows and tightens forehead skin), under the eyes (thickens skin and tightens and lifts the upper cheek skin), cheeks (lifts slightly and diminishes enlarged pores), mid-face, jaw line (diminishes jowling and sagging along the jaw line), and the neck (tightens skin and diminishes wrinkling of the neck). It can also be used to lift and tighten breasts, tighten and sculpture the back/waist, as well as sculpture the buttocks and legs.

**Attention!** Clients with pace-makers or other metallic implant objects in the head or body are not suitable for the RF treatment as electric currents from the system will cause undesirable effects. Also, those who are pregnant and/or nursing should not undergo the treatment
